OVERVIEW

PROFESSIONAL PROTECTIVE CLOTHING
10 good reasons for working with Sioen

1. High quality products according to the latest standards
2. A large product portfolio available from stock
3. Innovative solutions for your special requests
4. Technical expertise and intensive R&D
5. Dedicated customer service and sales teams
6. Strong brands
7. Ethical & Ecological charter
8. Our reputation as a trustworthy partner
9. Strong foundations as a financially healthy company
10. Vertically integrated

Sioen Apparel, Professional protective clothing

In brief

Sioen Apparel is the number one innovator in the domain of high quality protective clothing. In its “industry” segment, Sioen Apparel is European market leader. The cornerstone of the organisation is the hundred and twenty-nine-headed R&D department. We strongly invest in the research and development of new, revolutionary products.

With the recent addition of our multi-norm workwear collection, we completed our product range. This way, we approach our customers as a provider of integral professional protective clothing solutions. Whatever need or problem you’re facing, we’ll tackle it.

WHAT DO WE DO?

We...

High quality protective clothing

Sioen Apparel focuses on high quality professional protective clothing, specialised protective clothing and private label recreational clothing. In its domain, Sioen Apparel is European market leader, is active in more than 80 countries, employs over 2 800 persons in 8 plants.
Experience and dedication

With 55 years of experience in many industry domains, we understand what our customers need and in what conditions their employees work. We advise and offer them solutions in order to make their workplaces safer.

Professional protective clothing

Whether you’re looking for simple, comfortable bodywear or cutting-edge high-vis, multi-norm jackets, we offer everything in the domain of professional protective clothing.

Multilayering & multi-norm

It is important that you have clothes at your disposal that are adaptable to the ever-changing weather conditions. With our multi-layering concept you can keep yourself dry and warm and, above all, you’re shielded from wind, rain, hail and snow. From bodywear (underwear), over T-shirts, waistcoats and polos, to thermal wear such as bodywarmers and softshells, to multi-norm workwear to the outer layer. Every layer can be combined with another.

For optimal protection in hazardous working conditions, we developed our multi-norm collection. All clothes comply with the latest standards and protect against flames, welding sparks, arc flashover, static, chemical splashes, etc.

By combining the multilayering and multi-norm concepts, we have developed a clothing range that protects you all the time. From harsh weather to hazardous working environments, we have a solution for every condition.

Technical expertise

Every Sioen employee has a thorough technical expertise and understands what our customers need. This customer insight allows us to come up with good solutions for your problems. In case it concerns very specific situations, we can create adapted, customised clothing.
Local sales and global production

Added value:

» Whole range of high quality protective clothing: offering solutions for professional markets, such as multinorm clothes, clothing for chemical industry, protection against extremely cold environments, etc.

» Solutions for niche markets, like police uniforms, body armour, life jackets, protective clothing, etc.

» High quality clothes for B2C markets (private label), like winter sports, hunting, fishing...

» European market leader on professional markets

» Specialist in multilayer solutions

» Headquarters remain in Ardooie (Belgium), 8 Apparel production plants worldwide
Think globally, act locally is an adagio that can easily be applied upon Sioen. Whereas our headquarters are in Belgium, we operate all over the world, in production as well as in sales.

(Y)our Commitments

Sioen is committed to the conduct of an ethical business on all levels by acting fairly and honestly in all our dealings and by observing the highest standards of integrity. To achieve these, our company utilises the shareholders’ investments in a sensitive manner while delivering safe and quality products to our clients. We comply with both the spirit and the letter of legislation and submit all our actions to an external audit.

We invest in the environment, because a healthy environment is the condition to all life and activity. At Sioen industries, we want to contribute to solving the challenges our environment faces today: climate change, search for alternative sources of energy, use of less raw material, reduction of waste and emissions, a.o.

OUR CORPORATE SOCIAL RESPONSIBILITY - A BETTER TOMORROW

ISO 9001 compliant
ISO 14001 compliant
respect to human rights
productions according local environmental laws
sustainable textile production
pro-active sustainable product development

Sioen invests in a sustainable society. In business processes and relationships, Sioen Industries strives to preserve and improve the global environment through a pro-active environmental policy as explained in our CSR Manifest.
We refer to our separate CSR manifest. This brochure contains all information on the Sioen activities and on our Corporate Social Responsibility actions and policies.

**ISO 9001**
Quality management systems - Requirements are directly audited by a third party.

**ISO 14001**
ISO 14001 sets out the criteria for an environmental management system. It maps out a framework that a company or organization can follow to set up an effective environmental management system. It can be used by any organization that wants to improve resource efficiency, reduce waste and drive down costs.

**HUMAN RIGHTS**
The UN Global Compact is a strategic policy initiative for businesses that are committed to aligning their operations and strategies with ten universally accepted principles in the areas of human rights, labour, environment and anti-corruption. (source: www.unglobalcompact.org).

**REACH**
We guarantee that we are fully REACH conformant. REACH is the European Community Regulation on chemicals and their safe use. It deals with the Registration, Evaluation, Authorisation and Restriction of Chemical substances. Reach aims to enhance the human health and environment through a better and faster identification of the intrinsic properties of chemical substances.

**OEKO-TEX®**
for pro-active sustainable product development.

**Sustainable Textile Production (STeP)**
Sustainable Textile Production (STeP) is the new OEKO-TEX® certification system for brands, retail companies and manufacturers from the textile chain who want to communicate their achievements regarding sustainable production to the public in a transparent, credible and clear manner. As market leader, we want more than high quality products. We also want our production processes to be sustainable.

We are the first PPE manufacturing company to receive a STeP certification. The audit revealed that Sioen Apparel complies with the highest requirements of STeP by the OEKO-TEX® standard level 3 in regard to our structures, processes and management systems.
Sioen’s R&D centers and labs are fully equipped with the latest testing equipment

Testing for tear and breaking strength, flame retardancy, chemical resistance, water column, colour fastness, ageing and so on are all performed in house, and Sioen can stand comparison with the world’s top research institutes in this area. The ability to conduct flame tests (EN 367), and thermal radiation tests (EN ISO 6942) in-house has led to Sioen being one of the first European producers certified for the new EN 469:2005 standard for fire fighter clothing, and opens the way for Sioen to play a leading role in fire retardant garments. Sioen has its own ballistic laboratory including a shooting range and evaluation equipment. Ahead of the market. Along with creativity, know-how and quality, it is central to Sioen’s corporate culture.

**XENON TEST**
**Determination of the colour fastness**
Determination of the resistance of the colour of textiles to the action of an artificial light source (Xenon-arc fading lamp) representative of natural daylight. The fabric is exposed to artificial light together with a set of Blue Wool Reference under controlled humidity. The colour fastness is evaluated by comparing the change in colour of the fabric with that of the Blue Wool Reference used (grade 1 to 8). Requirement for HiVis EN 20471 complying fabrics.

**WASH TEST: HOME/INDUSTRIAL WASH**
**Determination of the washing durability of the garments**
Finished garments go through a specified number of washing cycles in order to determine washing durability.

**SURFACE CONDUCTIVITY**
**Determination of the surface conductivity of an antistatic fabric**
This measuring principle is used on fabrics with surface conductive yarns or homogenous conductive outside coating layers.

**SEAM STRENGTH (ISO 13935-2)**
**Determination of the strength of a seam/joint**
The force necessary to break or open the weakest seam in a garment by pulling at both sides of the seam/joint. Expressed in Newton and required in many standards for protective garments.

**TENSILE STRENGTH TEST**
**Determination of mechanical performance**
The force necessary to tear a fabric, measured by the force to start or continue a tear in a fabric. Expressed in Newton. The trouser shaped test method is prescribed in a lot of types of protective garments.

**MARTINDALE TEST**
**Determination of the abrasion resistance**
In the Martindale test, wool or sandpaper is used to rub the fabric over and over again with considerable pressure. Depending on how tough the fabric needs to be, this vigorous rubbing can continue non-stop for hours... or even days.

**PUNCTURE RESISTANCE (EN 863)**
**Determination of mechanical performance**
The puncture resistance is specified in the standards for chemical protective garments. The force necessary to push a pointed object through a chemical protective fabric. Expresses in Newton and divided into 6 classes (from 5N up to 250N).
**BALLYFLEX TEST (ISO 7854/B)**  
Determination of flex cracking resistance of waterproof material  
The number of flexing cycles a waterproof, chemical protective fabric can withstand without showing damages, without losing its waterproof properties. Expressed in number of cycles and divided into 6 classes (from 1000 up to 100000 cycles).

**SEAM STRENGTH TEST**  
Determination of mechanical performance  
The force necessary to tear a fabric, measured by the force necessary to start or continue a tear in a fabric. Expressed in Newton. There are several possible test methods specified in various European and International Standards. In the standard for chemical protective garments the trapezoidal tear resistance is specified.

**FLAME SPREAD (ISO 15025)**  
Determination of the limited spread of flames  
This test measures the limited spread of flames of vertically oriented textile fabrics (one or several layers), when subjected to a small defined flame. A defined flame from a specified burner is applied for 10 seconds to the surface or to the bottom edge.

**CRUMPLE FLEX TEST (EN ISO 7854:1997 METHOD C)**  
Determination of repeated flexing resistance of waterproof material  
Waterproof material used in rain garments (EN 343) must withstand 9000 cycles of repeated flexing without losing its waterproofness. This test is also a method to evaluate/compare different waterproof materials.

**HYDROSTATIC PRESSURE TEST**  
Determination of resistance to water penetration  
The standard specifies a hydrostatic pressure method for determining the resistance of fabrics to penetration by water. The highest class of water penetration resistance in this European Standard was deduced from several national norms which imposed a test pressure of 0.13 bar (1300mm).

**SPRAY TEST**  
Determination of the water repellency  
The evaluation of the test is visual appreciation of the surface of the fabric (number of absorption points on the surface).

**HEAT TRANSFER FLAME**  
Determination of the heat transfer index  
This standard defines a method to compare the Heat Transfer Index (HTI) of materials and material assemblies.

**HEAT TRANSFER RADIATION**  
Determination of heat transfer radiation  
The test EN ISO 6942 exposes the fabric of the suit to an intense radiant heat (40 kW/m²). The threshold of pain (1° degree burns) is defined, as well as the moment that 2nd degree burns originate and the reaction time (the time between RHTI 12° and RHTI 24°).

**RAIN TOWER TEST (EN 14360)**  
Besides the selection of the materials and their water-resistant properties, the waterproofness of the seams, also the design of the garment has an important role. At Sioen, the garments are put in a rain tower (build to EN 14360) on a manikin for one hour with a rainfall of 450 l/m²/h to detect possible weak points in the design. The manikin has a detection layer to visualize eventual leaking areas.

TECHNICAL DATA SHEETS
If you need more detailed information, download the product data sheets or consult the electronic catalogue.

www.sioen-ppc.com
A layered outfit: that is the perfect dress code to start your workday well protected and prepared for any kind of weather.

Every layer has its own specific function and together they interact and complement each other to offer you the best possible and optimal comfort at work, at all times.

1. **Bodywear:** keeps you **dry**

   The most important job of the base layer is to absorb perspiration and transport it away from your skin. The different yarns and fibres used in these products are specifically designed for this job. Some of them even have anti-microbial properties. This layer creates a micro-climate close to the skin keeping you dry and comfortable in different work conditions. As this layer is in direct contact with your skin, it has to be kind and gentle. Not causing any unpleasant irritation. By choosing a multi-norm base layer you’re extra protected in case the hazard penetrates the outer layers.

2. **Thermal wear:** keeps you **warm**

   The second or in-between layer must have good thermal insulation properties. In addition to this good breathability characteristics are important to transport perspiration further away towards the outer layer. Fleece or softshell fabrics are frequently used to this purpose, as they are pleasant and comfortable to wear. They have good insulating characteristics to keep you warm and comfortable in different weather conditions. A lot of these garments can also be worn separately. An thermal layer which also conforms to multi-norm standards adds to your overall protection in hazardous work conditions.
3. **Workwear: Keeps you protected**

This multi-norm workwear layer is designed to combine optimal multi-norm protection and wearer comfort at the same time. All garments correspond to the latest standards with regards to safety risks in day-to-day work environments: protection against flames, welding sparks, arc protection, anti-static, chemical splash protection etc. Various fabric qualities have been developed for the harshest work environments and different applications. The new range combines the highest levels of safety protection with excellent wear comfort and superb washing properties in an optimal mix.

4. **Rainwear: Keeps you protected and weatherproof**

The outer shell is the garment layer that shields you from external factors and can be exposed to severe conditions. It will protect you from harsh weather conditions like wind, rain, hail or snow. In addition this protective layer also conforms to different multi-norm standards and shields the wearer from for example accidental flames and electric arc flashes, chemicals etc...
