

FALL PROTECTION TOP SELLERS CATALOGUE

2021

Honeywell
MILLER®

Fall protection

For over 75 years, Honeywell Miller products have been protecting workers at height in a wide range of industries and applications, including: construction, telecommunications, wind energy, transportation, general industry, utilities and more.

Honeywell Miller selected for you more than a hundred of our best-selling products, gathered in a unique Fall Protection catalogue, named "The Essentials". Availability of the fall protection products in this catalogue is within three days depending on the order quantity:

A - up to 50 units

B - up to 20 units

C - up to 5 units

The product classification can be found on pages 52-57 of this catalogue.

Reliability and Innovation.

FALL PROTECTION

European legislation states that fall protection measures must be put in place by the employer of any person working at a height where a fall hazard exists. The regulation also requires that people involved in work at height are competent to do so or if in training, are supervised by a competent person. If it is not feasible to eliminate the hazard using a collective system then personal protective equipment (PPE) must be selected and used. It could be for restraint, work positioning, rescue or fall arrest purposes. This system consists of a full body harness, an intermediate attachment and an anchorage connector. The systems can only be used if a suitable anchorage point is located close to the work area.

Honeywell Miller products are designed and tested by full-time, qualified engineers and technicians at a state-of-the-art, in-house testing facility, which not only verifies that specific standards are achieved but often tests beyond the standards to assure the ultimate in safety performance. In addition, all Honeywell Miller products are third-party tested by independent sources to further certify compliance. Honeywell Industrial Safety has successfully earned and continues to retain ISO 9001 certification at its manufacturing facilities. Honeywell Miller has undergone the most stringent requirements for design and development, production and service, proof of our unwavering and ongoing commitment to consistent quality products and services.

Honeywell Miller products are developed in collaboration with workers to fit to their need to provide innovative solutions.

With our goal of being your comprehensive problem-solving provider, we are committed to meet your fall protection needs with innovative safety solutions mixing products and services such as training, hazards identification and tailor made products.

With sales offices and training centres throughout the world, Honeywell Miller is supported at a local level by our highly trained field sales force and dedicated technical support and customer service resources assuring reliable solutions to the most complex and technical requests.

WORKING AT HEIGHT CATEGORIES

Your working at height environment reflects the equipment that must be used. The categories summarised below have been defined by European Standards and are used as the base for work at height operations.

FALL ARREST

Equipment used to stop falling worker in the event of a fall from height.

Typical Fall Arrest System consists of:

- Anchor devices.
- Full body harness.
- Connecting devices.

RESCUE

Rescue & Evacuation of an injured high access worker is mandatory consideration for work at height operations.

Typical Rescue System consists of:

- Rescue & evacuation device.

WORK POSITIONING*

Equipment holding an operator in their place of work, allowing a hands free work environment.

Typical Work Positioning System consists of:

- Anchor devices.
- Full body harness with a positioning belt.
- Connecting devices (work-positioning lanyard).

WORK IN SUSPENSION*

Designed to lower and support a worker, allowing a hands free work environment.

Typical Suspension System consists of:

- Anchor devices.
- Full body harness.
- 2 ropes: 1 equipped with a descender, 1 equipped with a rope grab.

WORK RESTRAINT

Equipment used to prevent the workers from approaching a position from which they can fall.

Typical Work Restraint System consists of:

- Anchor devices.
- Work restraint belt or full body harness.
- Connecting devices (restraint lanyard).

CONSTRUCTION

WIND ENERGY

ROPE ACCESS

TELECOMMUNICATION

OIL & GAS

CONFINED SPACE

ELECTRICITY

INDUSTRY

RESCUE

* The positioning and suspension systems are not designed for Fall Arrest. A back-up Fall Arrest system must be used.

Introduction to fall protection basics

THE ABCs

A simple way of remembering the core components of a fall arrest system is the “ABC” of Fall Arrest. Quite simply, without one part, the system does not work.

A ANCHOR DEVICES

Definition: Used to join the connecting device (work restraint, fall arrester) to the anchorage, commonly referred to as the “tie-off point” (I-beam, scaffolding, or other structural point).

Anchor devices may be one of the two types:

- Permanent anchor devices (e.g. horizontal cable lifeline, horizontal rail systems...).
- Temporary anchor devices (e.g. steel strops, scaffold hooks, webbing anchorage slings, beam grips, and dead-weight anchor...).

B FULL BODY HARNESS

Definition: Used to hold a worker during & after a fall.

- Full body harness must be worn for Fall Arrest situations.
- Work restraint belts cannot be used for Fall Arrest.

C CONNECTING DEVICES

Definition: Used as intermediate attachment to connect the worker’s harness to the anchor device (e.g. shock absorbing lanyard, self retracting lifeline, fall limiter, rope grab etc.).

Connecting devices may be one of the two types:

- Fall Restraint: a fall restraint system prevents workers from reaching a hazard.
- Fall Arrest: a fall arrest system allows workers to reach a hazard and then protects them if they should fall.

LIFE CYCLE OF FALL PROTECTION EQUIPMENT

Please consult for detailed information the dedicated product user manual.

A. For our products made of mainly textiles (harnesses, lanyards, SRL with webbing¹)

The maximum life cycle is ten years from the date of production except in cases where environmental factors² and special conditions of use³ for fall protection equipment apply. An annual inspection done by a competent person⁴ (trained for PPE inspections) is mandatory.

B. For our products made up mainly of metal (cable SRL, karabiners, tripod)

We do not indicate a life cycle for our products made up mainly of metal. It is unlimited, under condition the product undergoes regular maintenance during the yearly inspection carried out by a competent person. In case of doubt or damage, the device has to be sent for expert inspection/repair at a local Honeywell Service Centre or the factory. For products not subject to maintenance (non workable), the life cycle is a maximum of ten years^{2,3}.

1. Except for Miller Falcon 6 m webbing and Scorpion Edge : Replacement of the webbing kit is every 5 years from date of manufacture.
2. Contact with chemical products, poor storage conditions, exposure to strong sources of heat (> 50°C), to ultraviolet (UV) radiation, harsh abrasion, etc...
3. Product deterioration, activation due to a fall, mechanical fault, premature wearing, intensity of use. All our products must have a statutory inspection performed in accordance with the user and maintenance by a competent person annually or more frequently if required by local legislation or noted in the user manual.
4. A person who has successfully completed an inspection course and who currently holds a valid inspection certificate.

In all cases, our products must be checked once a year.

Understand your fall factors to reduce the risks!

Getting to grips with the work hazards!

There are three fall factors in fall arrest that relate to the position of the anchorage point. They are used to determine the potential fall distance of a worker and so ensure that there is no risk of contact with the lower level in the event of a fall. When possible, the worker should always use an anchorage point at shoulder level or above (Factor 1 or 0). A higher anchorage point will reduce the fall distance and therefore significantly reduce the risk of injury on the body due to the impact forces of a fall.

THE PENDULUM EFFECT

When the lifeline is not anchored vertically over the work place, the worker will pendulum in the event of a fall and may be injured by hitting the ground or an obstacle to the side. If it is not possible to use an anchorage point close to the work station, two anchorage points either side of the worker can be used to prevent any swing.

FALL CLEARANCE CALCULATIONS

This is the distance a person will fall when connected to a fall arrest attachment point. It is related to the Fall Factors (see Fall Factor). Many situations can develop and it is ultimately the responsibility of the worker to ensure that there is a suitable fall clearance available. In order to calculate this, the worker must know the distances specified below, and it is also strongly recommended they attend a Honeywell Miller Fall protection training course.

The calculation below gives the minimum vertical clearance required between the anchorage point of the lanyard and the lower level.

- + Length of lanyard
- + Fully activated energy absorber
- + Body height from feet to harness attachment
- + Additional safety clearance

Examples :

Calculations using the following length lanyards are as follows:

- 2 m lanyard: 2 m (lanyard length) + 1.75 m (energy absorber) + 2 m (body height) + 1 m safety = 6.75 m
- 1.5 m lanyard: 1.5 m (lanyard length) + 1.5 m (energy absorber) + 2 m (body height) + 1 m safety = 6 m

Understand your fall factors to reduce the risks!

FALL FACTOR 0

Anchorage is overhead and the lanyard is taut between the anchorage point and the worker. The fall clearance is reduced as shown.

FALL FACTOR 1

Anchor point is level or above the harness attachment point allowing a fall equivalent to the length of the lanyard before the energy absorber deploys to arrest the fall.

FALL FACTOR 2

Anchor point is at or below the feet of the worker allowing a fall equivalent to twice the length of the lanyard before the energy absorber deploys to arrest the fall.

IF IN DOUBT: FALL LIMITERS REDUCE FALL CLEARANCE < 3 M

A fall limiter or self retracting lifeline will stop a fall in centimetres and is therefore the ideal solution for low-level work where a shock-absorbing lanyard is unable to stop the worker from hitting an obstacle below.

Harnesses

| Honeywell Miller harness features

Harness types

5 harness types

- 1-point harness: fitted with a dorsal fall arrest attachment (usually a D-ring)
- 2-point harness: fitted with a dorsal (usually a D-ring) and a sternal fall arrest attachment (either via 2 web loops or a single D-ring)
- Work positioning harness: fitted with either 1 or 2 fall arrest attachments as described above, and a work positioning belt (with side Ds)
- Suspension harness: fitted with either 1 or 2 fall arrest attachments and a work positioning belt as described above, and a ventral point for suspension.
- Belly point harness: fitted with either 1 or 2 fall arrest attachments and a work positioning belt as described above, and a belly point only valid to be used as a fall arrest in connection with a shuttle certified EN353-1.

Attachment points

3 attachment point types **Fall arrest** attachment point
(can be dorsal or dorsal+sternal)

Work positioning attachment point (side Ds) –
not suitable for fall arrest

Suspension attachment point (ventral point) –
not suitable for fall arrest

Adjustment Buckles

Mating Buckle

To connect the mating buckle, push the centre bar buckle completely through the square link and allow it to fall into place. Pull web end to tighten.

Quick-Connect Buckle

For belt, waist and leg straps interlock for quick easy donning and feature a dual-tab release mechanism to prevent accidental opening.

Cam Buckle

The locking tabs of the cam buckle trap the webbing to prevent unintentional slippage. Lift the locking tab for easy, one-hand adjustment/release. Promotes proper snug fit, will not slip or misadjust.

Webbing

DuraFlex® Webbing

Elastomer webbing specially formulated to stretch with the user's movements so there is no bunching or binding. Breathable, open-core padding technology allows greater mobility and increased comfort.

Water-repellent Webbing For longer life-span of the product. Used for H-Design range.

Fall arrest harnesses

Fall Protection is about protecting people who are working at height. Falls from height are the second most common cause of accidents in the work place and cost significant amounts every year to employers. The purpose of a fall arrest system is to safely stop a fall from height and to hold the worker until he can be recovered. A full body harness that conforms to EN 361 is the form of body wear used in fall arrest applications.

MILLER H500 [®] B

Whereas other harnesses protect workers from serious injury at the expense of their long-term well-being, the Honeywell Miller H500 aims beyond compliance to keep workers safe and supported – making your job easier and keeping you safer.

FEATURES & BENEFITS

- Light-weight and ergonomic
- Highly breathable shoulder/back padding
- Comfortable around the legs, waist, back, and shoulders
- Increased freedom of movement
- Smart rebar hook/lanyard keepers and SRL web link
- Side adjustment strap for better ergonomic fit – Quick and easy to fit and adjust
- Improved visible stitch pattern
- Fall-impact indicators

NEW MODERN DESIGN FOUR CORE MODELS

The modern ergonomic design provides higher visibility, smarter features and safer, more comfortable functionality. Select from four models, available in three sizes.

HONEYWELL MILLER® H500			
Industry comfort (IC)	Quick fit (QF)	Industry standard (IS)	High visibility (HV)
			
<ul style="list-style-type: none"> • Highly breathable, lightweight, ergonomic shoulder/back padding • Specially formulated comfortable leg and shoulder webbing • User-friendly resettable lanyard keepers 	<ul style="list-style-type: none"> • Lightweight breathable mesh vest • Specially formulated comfortable leg and shoulder webbing • User-friendly resettable lanyard keepers 	<ul style="list-style-type: none"> • Smart anti-tangle easy-donning solution • Specially formulated comfortable leg and shoulder webbing • User-friendly resettable lanyard keepers 	<ul style="list-style-type: none"> • Comfortable and lightweight lined High Visibility jacket (EN ISO 20471 Class 2) • Specially formulated comfortable leg and shoulder webbing • Auto quick-release leg buckles

FEATURES & BENEFITS

- Lightweight, ergonomic, breathable harness
- Comfortable around the legs, back and shoulders
- Increased freedom of movement
- Smart resettable lanyard keepers and SRL web link
- Quick and easy to fit
- Improved visible stitch pattern
- Clearly identifiable fall impact indicators
- Water-repellent webbing

BREATHABILITY DATA

The lower the RET (water vapor resistance) value is, the higher the breathability.

Fall arrest / Work positioning harnesses

A work positioning system is designed to hold a worker in a secure, hands-free working position and is used in conjunction with a fall protection system. A fall can occur while working and this is why a work positioning system is a combination of the fall arrest harnesses that complies with EN 361 together with a work positioning system to EN 358.

MILLER REVOLUTION™ PREMIUM R5

2-point + work positioning – Dorsal D-ring front attachment loops and work positioning belt.

FEATURES & BENEFITS

Benefits: Conforms to users movements

- Smoother movement when ascending or descending.
- Rotating PivotLink connections at waist level.
- Full freedom of movement.
- Integrated accessories system.

MILLER H500 ARC FLASH

Work environments are different, and each one has its own safety needs. Stay compliant with fall protection regulations and keep your workers safe against arc flash risks when working at height with the Honeywell Miller® H500 Arc Flash Harness.

FEATURES & BENEFITS

- Light-weight and ergonomic
- Made from polyamide webbing, which provides greater durability and comfort
- Removable shoulder padding
- 100% dielectric hardware
- Easy to buckle up.
- Tested to ASTM F887-20 with an electric arc energy of 40 cal/cm²
- Fall-impact indicators
- Protected label

Self retracting lifelines

| Blocks

MILLER SELF RETRACTING LIFELINES FEATURES

SWIVEL

Prevent damage to the lifeline from twisting during use and binding inside of the unit.

WEBBING

Lightweight and high abrasion resistance.

FALL INDICATOR

Highly visible fall indicator at the snap hook identifies when the unit needs to be removed from service.

EDGE TESTED

Innovative technology for working on edges featuring web with special heat and cut resistance.

Edge tested

ENERGY ABSORBER

Reduces the fall arrest forces in case of a fall, located on the lifeline.

SCAFF HOOK

Large opening karabiners allow connecting the self retracting swivel integrated lifeline to a large range of anchorage point.

CABLE GALVANISED OR STAINLESS STEEL

Cable and karabiners are treated to prevent from corrosion and rusting and extend service life.

Self retracting lifelines webbing

Self retracting lifelines are mechanical devices with quick-activating braking system that limits a free fall to centimetres, with reduced fall arrest forces making this especially suitable for low-space fall clearance. The automatic retractable cable allows freedom of movement for workers who need to move relatively quickly up and down on a worksite. Honeywell Miller offers the most comprehensive range of fall arrest blocks including robust, lightweight composite blocks, heavy-duty fall arrest, and rescue models with metallic housing; and choice of lifeline materials: webbing, stainless steel, and galvanised steel with lengths available from 2 m to 30 m. Also, Honeywell Miller has a complete range of edge-tested solutions including lanyards, webbing SRLs, and cable SRLs that deliver greater safety in case of horizontal application where the risk of fall over an edge is high.

TURBOLITE™ BLOCK

Best alternative to shock-absorbing lanyards used in Factor 2.
2 m – Self retracting webbing lifeline.

FEATURES & BENEFITS

Benefits:

- Usable in Fall Factor 2.
- Compact & lightweight.
- Low space clearance of 1.80 m compared to 2.50 m for a shock-absorbing lanyard (Fall Factor 0).
- Adapted to all situations when working with low space clearance.
- Can be used in Fall Factor 2 (below the back D-ring and not lower than foot level).
- Can be used both ways around
- Rated for up to a 136 kg in fall factor 0; and a 100 kg user in Fall Factor 1 and 2.
- Abrasion resistance and long service life.
- No annual factory recertification required.*

Features:

- Built-in web fall indicator identifies when to remove from service.
- Quick activating patent pending braking system.
- Provides 2 m working capacity lifeline.
- Engineered webbing (vectran/polyester webbing) for greater abrasion resistance and long service life.
- Built-in swivel prevents lifeline from twisting during use.
- High-strength, impact-resistant nylon housing for maximum durability.

Self retracting lifelines webbing

MILLER TURBOLITE™ EDGE SELF RETRACTING LIFELINE

The Miller TurboLite edge is a lightweight and highly durable 2m edge-tested web self retracting lifeline. It is certified at **140 kg in FF0, FF1 and FF2** and approved for foot level attachment.

FEATURES & BENEFITS

Benefits:

- Increased freedom of movement.
- Comfort at work.
- Reduced fall arrest distance, especially important when little vertical clearance is available.

Features:

- A twist-lock top karabiner for easy attachment to harness back D-ring.
- A swivel between housing and absorber to follow movements in all directions.
- A unique power spring mechanism inside housing for smooth sliding of lifeline
- Integrated fall indicator.
- Unique aluminium karabiner with integrated swivel avoids twist effect of the webbing which optimises webbing retractability (less risk of blocking), without adding length (no separate swivel).
- Very quick locking mechanism.

Four combinations of connectors

Certified to DIN19427 for use on mobile platforms and cherry-pickers.

Self retracting lifelines webbing

MILLER TURBOLITE™ EXTREME SELF RETRACTING LIFELINE

FEATURES

Features:

- Designed for use in edge applications with radius $\geq 0,5\text{mm}$
- Certified to EN360: 2002, VG11 (Rev 08) edge tested, compliant with datasheet CNB/P/11.060
- Galvanized cable lifeline
- Available in length of 2,75m
- Single and twin configurations
- Variety of lifeline connector options

Self retracting lifelines cable

FALCON™ BLOCK

The safest, most robust and comprehensive range of composite retractable lifelines on the market. 6.2 m to 20 m – Cable self retracting lifeline.

FEATURES & BENEFITS

Benefits: Increase durability

- Stops the fall within a few centimetres for a quick and safe rescue.
- Lightweight, robust composite unit.
- Easy-to-install.
- No annual factory re-certification required.
- Lowers cost of ownership and increases productivity.

Features: Easy adjustment

- Quick-activating braking mechanism.
- Highly visible fall indicator.
- Screwgate karabiner.
- Dual stainless steel swivels (unit top and snaphook).
- Corrosion-resistant stainless steel and aluminium internal components.
- High impact resistant nylon housing.
- Ergonomically designed moulded handle (15 m & 20 m models).

MILLER DURASEAL™ SELF-RETRACTING LIFELINE (SRL)

The patented Miller DuraSeal™ Self-Retracting Lifeline (SRL) is designed to perform in the harshest environments including onshore and offshore oil and gas, mining and petrochemical. The sealed technology, reusable brake system, field replaceable lifeline and corrosion resistant materials keep the product in the field to lower your cost of ownership.

FEATURES & BENEFITS

- Prevents contaminants from entering the unit with highest industry rated sealed technology IP69K
- Built to last reusable brake design withstands multiple falls
- Quick, low cost repair with field replaceable lifeline
- Reduces fatigue and increases productivity with units up to 30% lighter than competitive sealed units
- Enables, quicker easier installation and provides protection from rain
- Product service life is extended in the harshest environments with corrosion resistant components

Self retracting lifelines cable

FALCON™ EDGE

Edge-tested self retracting lifeline with optimal safety for all situations when working at height

FEATURES & BENEFITS

Benefits:

- Protects in all work situations (horizontal, vertical, mounted overhead, anchored at foot level and work near edges).
- Quick arrest and short fall distance (fall distance <1,40 m, tested at 136 kg).
- Available in 6,2 m, 9 m working lengths; 15 m and 18 m will be available in 2018.
- Increased durability, simple maintenance and extended service.
- Increased lifetime and lower cost of ownership:
 - Quick and easy to maintain (no annual maintenance).
 - After 10 years of use: only cable and shock absorber replacement.

Features:

- Designed for edge applications with an edge radius of $\geq 0,5$ mm.
- Meets the most stringent safety standards, including EN360 Type B, VG11 (Rev 08).
- Certified to 2014 latest test requirements (VG11 edge-tested): Edge configuration tested to max weight - 136 kg.
- Integral shock absorber connected to the worker to increase safety.
- Unique patented shock absorber pack offering longer lifetime versus textile, resistant to UV and humidity (IP67), requires no annual inspection.
- Highly visible fall indicator on ergonomically designed robust handle.
- Corrosion-resistant internal components
- Dual swivels increase mobility and minimize lifeline from twisting.

Lanyards

A lanyard is used to connect the workers harness to the anchorage point as an intermediate attachment when working at height. A connecting lanyard may be one of the 3 types: **Fall Arrest**, **Fall Restraint**, or **Work Positioning**.

MILLER LANYARDS FEATURES

ENERGY SHOCK ABSORBER

Featuring a built-in absorber which limits the fall arrest force in a fall situation to 6 kN.

ELASTICATED MANYARD®

Light and stretchable, it moves with the worker and reduces tripping or snagging hazards.

EDGE TESTED

Innovative technology for working on edges, features webbing with special heat and cut resistance.

Edge tested

ADJUSTABLE

Fall arrest, restraint or work positioning lanyard can be easily adjusted to the length needed to work safely and comfortably.

CONNECTORS

Connectors are available to attach to different anchorage points.

Edge-tested shock absorbing lanyards

Edge resistant lanyards: unique solutions to solve the technical problem posed by the breaking of fall protection equipment on edges! To prevent the risk of failure on an edge during work at height, requires a two-fold solution: fall arrest equipment has been developed with resistance to failure on edges whilst also absorbing the fall arrest forces.

MILLER EDGE-TESTED KERNMANTEL LANYARDS

Kernmantel shock absorbing lanyards

FEATURES & BENEFITS

Benefits:

- Edge tested kernmantel ropes.
- Safe work on edges.
- Abrasion resistant.
- Easy identifiable from a distance.
- Easy pre-use safety check.
- Fitting all workers needs (different lengths and connectors).

Features:

- Edge tested products (compliant to VG11 PPE 11.074).
- High quality kernmantel rope.
- Highly visible rope (Light green).
- Multicolor stitches assist inspection.
- Wide range of products.

Edge-tested shock absorbing Manyard®

To prevent the risk of a fall, it is made of stretch webbing and comes with a variety of connectors. With a maximum of 2 m length, it includes an integrated shock absorber to dissipate the forces on the body in case of a fall. Light and stretchable, Manyard® moves with you.

EDGE-TESTED STRETCHABLE SHOCK-ABSORBING LANYARDS

Edge tested

FEATURES & BENEFITS

Additional benefits:

- Mechanical properties resistant against cutting and shearing.

Additional features:

- Patented core-yarn technology.
- Identifiable green tubular webbing with a black stripe or with a black shock-absorber.
- Wrapped filament combining two types of thread: one shock absorbent and one abrasion resistant.

Work positioning lanyards

Used to allow hands free work, to complement a fall arrest system. The length is easily adjustable with one hand to fit around the structure and then onto the side D-rings of the harness belt. Conforms to EN 358.

MILLER HANDZUP®

Work positioning lanyard that leaves your hands free to work in complete safety!

FEATURES & BENEFITS

Benefits:

- Specially designed for improved handling and greater comfort during work.
- Just a few seconds are sufficient to accurately adjust the lanyard to the perfect work positioning point.
- An economical system: it is not necessary to change the entire system when only the rope is unserviceable. The rope can be replaced by a user when necessary.
- Rope that lasts double the length of time: the new polyamide braided rope is twice as resistant compared to ordinary rope.

Features:

- 2 aluminium side plates.
- ABS handle.
- Aluminium compartment.
- Stainless steel pivoting cam.
- 100% polyamide braided rope, diameter 12 mm with or without protection sleeve.
- Plastic sleeve protecting rope termination.
- Optional repositionable locking screw.

RG300 NON-REMOVABLE ROPE GRAB

FEATURES & BENEFITS

- Compliant to EN 353-2:2002
- Maximum user weight of 140 kg
- Long-lasting product in standard conditions
- Resistant to shocks and dust
- Ergonomic
- Edge tested
- Provides mobility and comfort around the rope
- Rope diameter 11 mm

Anchorage points

One of the most important aspects of a fall protection system, is the selection of a reliable anchorage point (A) to ensure full safety. This shall:

- have a static resistance.
- be located at a safe distance above any lower obstacles.
- be as vertical as possible to the work station to avoid the swing effect.

TITAN™

Webbing anchorage sling.

FEATURES & BENEFITS

Benefits: The anchorage sling provides a secure anchorage point for the fall arrest device

- High breaking strength.
- Lightweight.
- Safe and easy-to-install anchorage point.

Features:

- 20 mm red and black polyamide webbing.
- Breaking strength: >10 kN.

REF.	LENGTH
1008360	0.6 m
1008361	0.8 m

Conforms to EN795b:1996 & EN566

Miller Relief Step

The Miller 9099 Relief Step is designed to relieve suspension trauma after a fall arrest.

FEATURES & BENEFITS

- Provides support and helps blood circulation until rescue.
- Attaches to any brand/style full-body harness.
- Small and lightweight.

REF.	
1031570	2 relief steps Miller (pair)
1100211	Relief step (12 pairs)

WEBBING MOBILE LIFELINE WITH ANCHORAGE SLING

Webbing Temporary Horizontal Lifeline

FEATURES & BENEFITS

Benefits:

- Offers a large working area.
- Fast and easy to install.
- For use by one or two workers.
- Maximum working length 20 m.
- Fixing to either permanent anchorage points or temporary webbing anchorage slings.

Features:

- Durable polyester webbing with 35 mm.
- Length adjuster.
- Delivered in a bag.

REF.	DESCRIPTION
1011160	Webbing mobile lifeline 20 meters
1012060	Webbing mobile lifeline 20 meters with 2 fall indicators

Confined space

DuraHoist 3Pod

FEATURES AND BENEFITS

A single tripod adjustable to various confined space work situations. It is easy to transport and rapid to install.

- Easy to carry & move (leg profile ergonomic for hand grip)
- Easy & safe to install in less than two minutes (all legs open simultaneously, one knob fixing all legs together)
- Adaptable to different manhole sizes (1 m – 1.50 m – 2.50 m)
- Certified to the last requirements of the EN 795:2012 class B (CN/TS 16415)
- Tested for two persons (up to 140 kg each)

Miller Totem DuraHoist Post

The Miller Totem DuraHoist Post has been especially designed to provide a safe anchorage point during maintenance work on electrical transformers.

FEATURES AND BENEFITS

- Up to 4 operators (2 on each « S »)
- “S” anchorage point with fall indicator
- Lightweight - only 7.5 Kg
- Red mark to ensure correct insertion of the post inside the plate
- Very easy to set up
- 2 handles for transport

PSS kits

Fall protection equipment is a category 3 PPE, because it protects the user from serious or mortal danger. It is therefore absolutely mandatory to follow a fall protection programme before using your equipment. For information about Miller training : millertraining@honeywell.com

Honeywell Miller Services

INDUSTRIAL SAFETY PPE TECHNICAL SUPPORT

Honeywell Industrial Safety PPE Technical Support provides personal one-on-one assistance for your Fall protection questions. Staffed with experienced professionals, they are ready to immediately respond to your telephone call with the answers you need to safely operate your business.

OUR TECHNICAL EXPERTISE IS AT YOUR SERVICE FOR ANY QUESTIONS REGARDING:

- Recommendations on products linked to a specific application or sector.
- Any technical request on Honeywell Miller product specification.
- Specific product requests.
- Product certifications & standards.
- Requests on instruction sheets – technical sheets.

HONEYWELL MILLER FALL PROTECTION TRAINING

LEGISLATION REQUIREMENT

Training is an essential part of any safety program. The employer is responsible for ensuring that any person working at height is fully informed regarding the correct use of PPE and systems.

FUNDAMENTAL FALL PREVENTION/ PROTECTION TRAINING

The legislation states that a fall arrest system must be used when working at a height where a fall hazard exists. This system consists of:

- Anchorage point/anchorage connector.
- Body wear – full body harness.
- Intermediate attachment.

TOTAL TRAINING SOLUTIONS

Honeywell Miller Training Programs are considered to be a central part of their global fall protection offer, and provide awareness, knowledge, and the skills necessary to ensure safety on the worksite to suit all areas of industry and the emergency services. Taught by field-experienced, professional instructors, the training sessions include live demonstrations, and hands-on training, while addressing site-specific variables and performance requirements of fall prevention and protection.

In addition, Honeywell Miller Training offers a comprehensive list of height safety courses conducted at a customer's facility or at the Honeywell Miller Innovative Technology & Training Centres:

- Construction: Steel Erectors, Scaffolding and Roofing
- Telecommunications
- Electricity
- Wind Energy: simulator
- Oil & Gas

HONEYWELL MILLER SERVICE CENTRES:

- inspection
- repair
- maintenance

Honeywell Miller offers to the users of its products a service to inspect, repair and maintain devices locally, quickly. Honeywell Miller service points are trained then certified by technicians, store necessary spare parts for a repair and maintenance of equipment according to maintenance guide.

Contact your closest centre for an answer adapted to your request.

- Rope Access
- Confined Space
- Cleaning
- Ski Lifts
- Maintenance
- Rescue and Evacuation

For further information on our range of Industrial Fall Protection training courses, please contact your local Honeywell Sales office or Fall Protection Representative to customise your personalised training courses.
